

mimio classRoom™

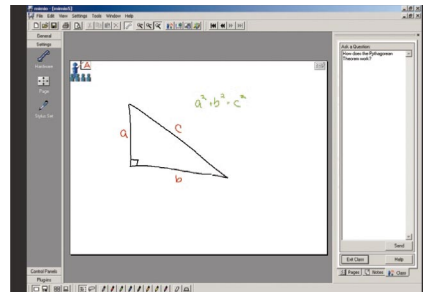

Share whiteboard notes in real-time with mimio classRoom

mimio classRoom enables teachers to share whiteboard notes with students in real-time in a networked environment. Real-time distribution of notes allows students to concentrate on materials presented and participate in class discussions rather than simply copying everything that is written or drawn on the whiteboard during class.

mimio classRoom is an ideal solution for networked and mobile-cart-equipped classrooms.

Edit class notes

Students are able to edit the notes - adding their own individual components and highlights - which can then be saved and reviewed hours, days or weeks later. The student's ability to edit class notes helps to improve retention by creating a supplement to what was written or drawn on the whiteboard. All the notes (both teacher and student) can then be saved for later review.

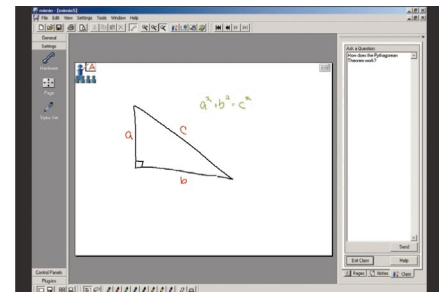

Engage students

The "Ask a Question" feature enables students, meeting attendees and trainees to interact with instructions in real-time. With this new feature, students are able to submit questions which can be answered during the class, or saved and answered later - ensuring that everyone is "on the same page".
